

Loxahatchee River Watershed Status RiverKeeper Water Quality Monitoring Report

Dr. Betsy Stoner, our new Sr. Scientist, has been busy preparing a technical report for our RiverKeeper water quality monitoring program. This report is prepared in partial fulfillment of a Loxahatchee River Preservation Initiative (LRPI) grant that we received, and provided us the opportunity to take a comprehensive look at our data. We explored both the long-term and recent data relative to the water quality target established by DEP/EPA. We also compiled all of the sucralose data that we have assembled as part of our work to identify sources of pollution. At our meeting we will provide a brief summary of our findings.

Proportion of samples with detectable Sucralose concentrations
