Metric	Explanation
Sewer Overflow	On October 19th an air release valve located on the wastewater force main parallel to Tequesta Drive and just east of the bridge failed resulting in a sewer overflow. The failure was addressed and repaired.
Grease Interceptors	18% of inspected grease interceptors required a pump out due to significant grease accumulation. Grease interceptors provide critical pretreatment at commercial food service establishments, because they prevent grease from entering and damaging our sewer system.
Operating Expense	October is the first month of our fiscal year, and we spent less than projected using a straight-line projection method. The shift from over budget in September to under budget in October coincides with implementation of the new fiscal year.
